Operation

BEFORE OPERATION

Before use, please check whether the voltage of power supply is in conformity with that in the data plate, and whether user's power switch and fuse are in conformity with the request of machine's power. The body must be grounded properly. Make sure the potential terminal bolt is firmly connected with the natural grounding device by the 1.5mm² wire.

OPERATION STEPS

1. Lift up the water tray lid, add the water to the water box.
2. Turn the thermostat to the "0" placement.
3. Plug into the power supply, then the indication light will turn green, set the dial to the required temperature setting, the yellow light will turn on and the heating tube will start to work. When the temperature reaches the desired setting, the thermostat will shut off the power, the yellow light will turn off, and the heating tube will stop working. When the temperature drops below the desired temperature, the thermostat will start working again automatically, and the process will begin again. This process repeats until the unit is switched off.
4. When finished, turn the thermostat to the "0" placement and disconnect from the power supply.

Maintenance

CLEANING AND MAINTENANCE

Clean the machine with a damp cloth and mild detergent. Never rinse the machine with running water or spray jets.

NOTES

User should remove the plug from the power supply and switch the machine off when not in use and when maintaining. If the machine is not working nominally, please contact Omcan for service.
